Bekaert Specialty Films Achieves ISO 14001:2004 Certification

Bekaert Specialty Films Achieves ISO 14001:2004 Certification - 25/09/2009

[Visit website >>](#)

Release type: **Products**

Bekaert Specialty Films LLC, manufacturer of industry-leading Solar Gard® window film, today announced it has earned ISO 14001:2004 certification. This accomplishment further solidifies BSF's commitment to minimising the manufacturing impact of its energy-saving window films. ISO 14001 is an international standard for environmental management systems whose goal is to reduce the ecological footprint of a business and decrease pollution and waste.

To achieve this voluntary certification, Bekaert Specialty Films established an Environmental Management System (EMS) to ensure the company's activities and products have minimal impact on the environment. Bekaert Specialty Films' EMS helps monitor and improve energy efficiency, resource conservation, waste management and chemical control. Additionally the EMS aims to:

- Reduce the environmental impact of BSF's manufacturing operations;
- Improve the work environment and create cross-functional teams that foster awareness, understanding and responsibility across the organisation; and
- Enhance relations with the community, regulators and stakeholders.

"ISO 14001:2004 certification is an extension of our commitment to protecting the environment and ensuring the health and safety of employees, customers and the communities in which we operate," said Christophe Fremont, President, Bekaert Specialty Films, manufacturer of Solar Gard window films. "More and more companies are prioritising window film in their budgets, and our environmental standards will give them confidence that our products are the right choice to achieve their energy savings goals."

Independent analyses show that window film can help organisations reduce energy expenditures by up to 30 per cent. Recognised by the Department of Energy as an energy-saving solution, window film reduces the load HVAC systems have to manage and helps save electricity. Through the Solar Gard Energy Toolbox, facility managers can receive customised energy analyses and quantify the value of professional window film installation.

In addition to its ISO 14001:2004 certification, Bekaert Specialty Films has also been recognised as a Climate Action Leader by the California Climate Action Registry, and was the first specialised film manufacturer to certify and publish its carbon footprint. Solar Gard window film has been endorsed by the Clinton Climate Initiative and is recognised for its role in reducing energy consumption in commercial properties and residential homes worldwide. Professionally-installed window film is one of the most diverse products on the market, offering important features to property owners including energy savings, UV protection and safety enhancements.
