**Make vehicles stand out from the crowd**

and corrugations with ease and has been developed for use on flat or slightly curved surfaces. Roll widths available are 1370mm and 1525mm.

Graficast Matt white MSC001 and black MSC002 have a life expectancy of seven to 10 years and is ideal for cars, boats, vans and even planes.

The Deco and Leather look films give great effects inside or outside of vehicles. At present Deco is available in styles Antiqua, Galactica and coming soon are Bali, Antarctica, Suburbia and Silk Road. The thickness of these films varies for each different effect but they still have the excellent Graficast properties and will apply over rivets and corrugations and have an expected lifespan of five years. At present, the leather look is available in Amazon and Savanna styles, coming soon will be Tundra and Orinoco.

There are a number of complementary products available for use on vehicles: Solar Gard window tint film being one of them and NR Smoke plus 5 blocks more than 98% of ultraviolet light yet has excellent clarity. It is also satellite radio, GPS, mobile phone and tyre pressure monitoring system friendly. GrafiiWrap OWV one-way vision material is a gloss micro-perforated solvent printable film with 50/50 light transmission. It is ideal for window displays on vehicles as well as in shops etc. It has an outdoor life span and maintains excellent removability for up to one year.

**G**rafityp UK Ltd continues its success with its GrafiiWrap printable vehicle wrapping films. Launched more than 10 years ago, GrafiiWrap was the first two-part vehicle wrapping system to arrive on the market. The GrafiiWrap system consists of GrafiiPrint S34P Media and a cast over laminate of GrafiiPrint LAM040 and is still made to the original specifications. GrafiiWrap S34P long term white gloss cast comes in three sizes, 762mm, 1370mm and 1525mm in lengths of either 10 metres or a full roll of 50 metres. It is a 10-year cast wrap material with a grey adhesive for opacity and is just 50 microns thick. It is recommended to use an over laminate of Grafityp LAM040 which is just 40 microns thick, the new LAM045 Matt laminate or LAMSD Stardust effect for best results. The freedom to create almost any desired design by printing, coupled with superb properties, ease of handling and applying make GrafiiWrap an excellent choice for any vehicle wrapper.

GrafiiWrap S38P was introduced to cater for vehicle wraps on cars and vans with deep indents. Its basic properties and performance are the same as S34P but have been specially developed to provide extra grip in deep areas. The thicker layer of glue on this material makes it an ideal medium for use by the novice or inexperienced fitter who may attempt to stretch into deep recesses,

thinning the adhesive to the extreme. More recently Grafityp has introduced an ever growing range of Auto-Deco films with effects such as carbon fibre and leather look, and Graficast ColourWave is another exciting addition to the line up. As the light reflects on it at different angles it will appear to change colour, an excellent way to create dramatic, exciting colour effects on cars and vans. It is recommended to use Grafityp LAM040 over laminate in conjunction with this material, which will apply easily over rivets, indents or corrugations. The vehicle paintwork beneath remains protected from the weather, scratches and stone chips. Graficast Colourwave comes in five striking colours, Extreme Purple, Electric Violet, Blue Metal, Laser Green and Mother of Pearl.

There are three new additions to the Metallic cast section in CM60 red, CM61 blue and CM62 green with a five-year lifespan and a CM75 black glitter film with a two to three year lifespan, 1370 and 1525mm wide. These will also apply easily over rivets and corrugations. If used for wrapping cars, these films should be laminated to avoid matting when the film is stretched, it is recommended to use LAM040 from the Grafityp range. Next up is the new C70 Graficast Brushed Aluminium effect. A soft structured PVC cast film with up to five years outdoor life. Brushed Aluminium will again apply over rivets

For those that do not own a laminating machine Grafityp offers a lamination service and will be happy to provide a quotation. Anyone wishing to learn the art of vehicle wrapping can enrol on a certified and comprehensive two-day Grafityp training course at its premises in Tamworth, Staffordshire. The course provides intensive hands-on wrap training plus everything the student need to work to a professional standard. The student is also given guidelines for dealing with customers first hand, the benefits of wrapping vehicles, paint waiver documentation, aftercare, and digital print and colour changing. Lunch and refreshments are included. For more information call 01827 300500, e-mail: [sales@grafityp.co.uk](mailto:sales@grafityp.co.uk) or visit [www.grafityp.co.uk](http://www.grafityp.co.uk).
