Eco-conscious

GO GREEN

**WITH ENVIRONMENTALLY FRIENDLY
DESIGNS FOR YOUR HOME...**

Introducing: The Duemillaotto kitchen from Boffi, created by Piero Lissoni, combines artisan craft and natural materials with cutting-edge design. Materials including reclaimed wood, natural stone and solid wood contrast with Corian® and stainless steel. From £30,000.

Eco appeal: The use of reclaimed solid Alpine acacia wood avoids the use of other unsustainable sources. This recycled material is heat-treated but not stained, and so retains its natural beauty.

Introducing: Roca's award winning W+W is an all-in-one WC, with a washbasin on top of the cistern. This innovative design was created to maximise space and to conserve the use of water. For hygiene purposes, the basin's waste water is treated by a filtration system before being used for flushing. Prices on request.

Eco appeal: This cutting-edge idea, incorporating 'water-reuse' technology, uses waste water from the basin to fill the WC cistern, thereby reducing water usage by up to 25 per cent, compared to a 6/3l dual-flush WC.

Introducing: Billed as the world's most advanced range of food waste disposers, InSinkErator's Evolution® series can cope with large bones and stringy food, previously a no-go for such appliances. The Evolution 200 features a three-stage system for the finest possible grind, and is said to be 60 per cent quieter than a standard food waste disposer. Around £390.

Eco appeal: Reduce the number of black bags you put out for the bin men – which ultimately go to landfill – by using such a unit, which chops food waste and disposes of it via the waste water treatment system. It's especially useful if you don't have the space for composting.

Introducing: AllClear stay-clean coating is now available in a kit, the Surface Protection System, for home application. This nanotechnology coating can be used to treat glass, ceramic, tiles and granite, to maintain a sparkling finish without the need for all sorts of chemical cleaners. £29.79.

Eco appeal: Surfaces treated with AllClear need only a wipe with a cloth and fresh water to keep them clean, thus by avoiding the need for chemical cleaners, the environmental impact is reduced.

Introducing: GLASSeco's kitchen worktops are made entirely from waste glass including bottles, jam jars, television screens, car windscreens and old windows. Worktops can be made in a wide range of colours, with the option of a matt or polished finish, and customers can specify the ratio of clear to coloured glass and the addition of other recycled ingredients such as glass dust, seashells, crushed CDs or copper filings. From £270/m.

Eco appeal: Recycling glass in this way stops it going to landfill where it sits without decomposing.

Introducing: Little Greene has developed a new range of eco-friendly multi-surface paints for high performance areas including the kitchen and bathroom. Highly durable, stain-resistant, washable and scrubbable, ULTIMATT™ emulsion is also tough enough for use on skirtings and radiators. The paints are available in all Little Greene shades, including Jack Black, as shown. £29/2.5l.

Eco appeal: Formulated with minimal volatile organic compounds (VOCs), ULTIMATT™ emulsion is also water-based and virtually odourless, so it's ideal for use in an eco-friendly home.

Introducing: Reduce the amount of solar energy entering your home on sunny days with this window film from Solar Gard®. This clever product rejects up to 79 per cent of the heat-giving rays, keeping rooms at a more comfortable temperature. From around £32-86/m².

Eco appeal: This solution will allow you to keep your cool this summer without resorting to power-hungry air conditioning – which of course can impact on both your pocket and the environment – without limiting the amount of light that comes in through the windows and doors.
