Number 1 Poultry is one of the most distinctive buildings in London. Like all buildings located in the financial heart of London, 1 Poultry faced an above-average risk of collateral damage from terrorist attacks. With more than 2000 m² of glass at 1 Poultry, the building management team was already fully aware of the risks that flying glass could pose and had installed bomb-proof window film some years ago.

However, with the film having reached the end of its useful life, the decision was taken to replace it with a newer, stronger window film.

Solar Gard Armorcoat was chosen because of its reputation as a strong, resilient film that helps protect people and property from the dangers of flying, broken glass. Armorcoat safety film works by keeping the dangerous shards of glass together after being shattered by a bomb blast protecting building occupants as well as passersby. Designed specifically for safety and security applications, Armorcoat film has met impact requirements for some of the most stringent tests in the industry and has been field tested for over 20 years.
